About RockSheet

RockSheet is real stone, sliced thin: a veneer of natural stone, sandstone or marble on a fibreglass backing that gives it extra strength. You get the look and texture of a stone wall without heavy stone work, and because the stone is so thin, light passes through it.

Uses less stone

Only a few millimetres thick, where conventional tiles are typically 10 mm, so far less natural stone goes into every wall.

Can be backlit

The stone is translucent: light it from behind for glowing walls, counters and ceilings, indoors or outside.

Light weight

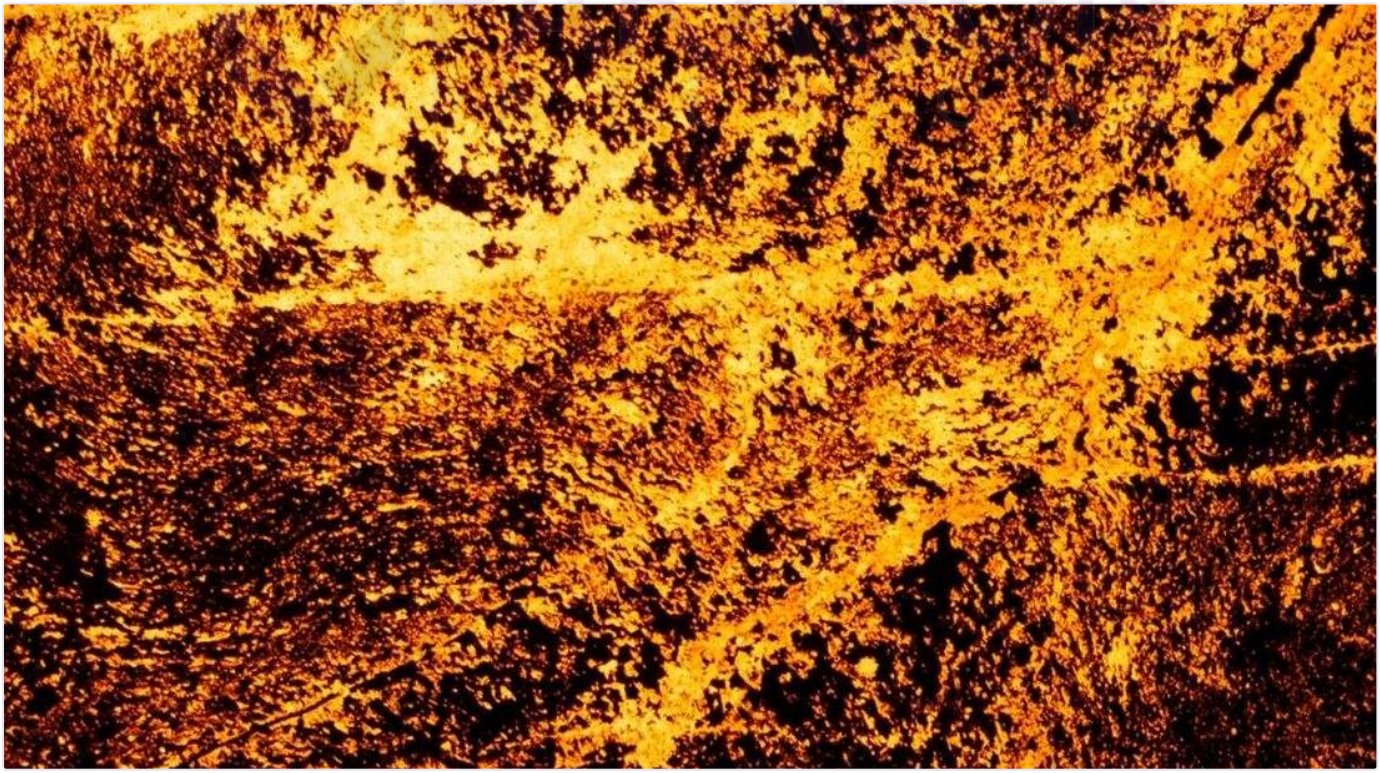

About 1 kg for every 5 sq ft, so it is easy to carry and puts little load on a wall.
